

NUSO Bridge for Microsoft Teams

Turn Microsoft Teams into a Complete Business Communications Platform

NUSO Bridge for Microsoft Teams transforms Teams into a fully integrated communications hub, combining enterprise-grade voice and messaging into a single familiar interface. It enables businesses to consolidate communications, reduce complexity, and scale globally, without sacrificing control, performance, or compliance.

Today's Business Communications Challenge

Microsoft Teams is widely adopted but turning it into a complete phone system can be complex. Organizations face fragmented deployment options, costly infrastructure, limited visibility, and administrative overhead. Managing voice, compliance, and user experience across multiple tools slows down IT teams and creates gaps in reliability and security.

The NUSO Answer

NUSO Bridge simplifies and enhances Microsoft Teams by delivering voice, contact center, and messaging capabilities directly within the Teams environment. With flexible connectivity options – Operator Connect, Platform Connect, and SIP Connect – NUSO Bridge reduces complexity, centralizes management, supports compliance, and improves reliability, visibility, and overall user experience.

Flexible Connectivity Options

Select from Operator Connect, SIP Connect, or Platform Connect to meet diverse deployment, compliance, and geographic requirements.

Embedded Voice & Messaging

Enable PSTN calling, SMS, and advanced communication features directly inside Teams across desktop, mobile, and devices.

Integrate Compliance Recording

Embed compliant call recording in Teams with NUSO Connect Recorder, delivering secure storage, encryption, transcription, analytics, and centralized access for compliance.

Centralized Management & Provisioning

Leverage the intuitive NUSO portals for real-time provisioning, user management, and service control across all deployments.

Businesses of All Sizes and Industries

- Standardizing communications in Teams
- Replacing legacy PBX systems
