

# NUSO Bridge for Microsoft Teams Call Manager

Simplify Microsoft Teams Operator Connect.

Managing Teams Phone shouldn't require tenant-wide admin rights or a PhD. With NUSO Bridge Call Manager, configuring and managing Microsoft Teams voice becomes intuitive, secure, and incredibly efficient. Whether you're supporting one site or dozens, Call Manager makes it easy to quickly get users connected.

## The Complexity Challenge

Configuring and managing Microsoft Teams voice services can be cumbersome, time-consuming, and too-frequently overwhelming. IT teams must navigate multiple admin portals, complex key tasks and settings, and grant broad tenant permissions: creating operational inefficiencies, slowing deployments, and increasing security risks across users, locations, and voice environments.

## Simple. Secure. Scalable.

NUSO Bridge Call Manager eliminates complexity with a purpose-built, intuitive interface with guided workflows to accelerate deployment. Centralized management streamlines ongoing operations, making multi-account and multi-tenant administration simple. Role-based access ensures secure administration, allowing IT teams and partners to manage Teams Phone efficiently without exposing full tenant permissions.

### Fast, No-Code Deployment

Quickly deploy and configure Teams Phone using guided workflows that focus on reducing setup time and complexity.

### Secure, Role-Based Access

Enable voice administration with granular, role-based permissions that protect the Microsoft 365 tenant and maintain strong security and compliance controls.

### Centralized, Intuitive Management

Manage users, numbers, and configurations through a single, purpose-built interface designed for simplicity across locations, departments, or multiple tenants.

### Complete Teams Voice Solution

Combine simplified management with NUSO Operator Connect for reliable, scalable, carrier-grade calling fully integrated within the Microsoft Teams environment.

## Ideal For

- Organizations deploying Teams Phone for the first time
- Businesses migrating from legacy PBX systems
- MSPs managing multi-tenant Teams Phone environments
- Enterprises requiring secure, role-based voice administration
- Companies seeking faster, simplified Teams Phone experience
