

Command & Control

Real-Time Visibility and Control Across the Communications Ecosystem

Enabling organizations to manage and automate communications across voice, messaging, numbering, and APIs in real time. By embedding communication capabilities directly into operational workflows, teams can monitor, direct, and respond instantly - eliminating manual processes and accelerating decision-making across distributed teams and partners.

Today's Challenge

Businesses struggle to manage telephony infrastructure spread across multiple carriers, platforms, and even regions. Number provisioning, inventory tracking, and porting requests are frequently handled through manual processes and disconnected systems. This lack of centralized visibility slows deployments, increases operational overhead, and makes it harder to maintain control as communications environments grow.

NUSO Delivers

NUSO simplifies operations by centralizing communications management and simplifying workflows. Organizations gain real-time visibility across numbers, services, and accounts while streamlining provisioning, number ordering, and porting. With structured account hierarchies, role-based permissions, and powerful APIs, teams can reduce manual effort, accelerate deployments, and maintain full control over their communications ecosystem.

Granular Access Controls

Assign role-based permissions to streamline operations while maintaining security and compliance.

Real-Time Number Inventory

Track and manage DIDs and toll-free numbers across geographic regions with immediate visibility, including number ordering and porting.

Extensive API Enablement

Integrate provisioning and communications services directly into business systems, CRM platforms, or operational tools.

Unified Operational Awareness

Gain comprehensive oversight across communications assets, activity, and performance to support faster decision-making.

Streamline Workflows and Operations

- Rapid Expansion & New Site Deployment
- Partner & Reseller Ecosystems
- Multi-Location Business Management
- Communications Automation via APIs
- Number Inventory & Carrier Management
- Enterprise Telephony Consolidation

up to **70%**
Faster Provisioning

100% Real-time visibility across communications assets

5.3 billion
Calls processed monthly across the NUSO network

up to **50%**
Operational Overhead Reduction

Multi-Location Retail Business

A growing multi-location retailer can quickly view available numbers, provision services, assign permissions, and activate communications in minutes, gaining real-time visibility and centralized control across all sites.
