

NUSO.io Management Portal

Command and Control at Scale

NUSO.io gives you command and control over the cloud communications stack - voice, messaging, numbers, and more - all from a single, secure portal. Designed for channel partners and enterprise admins, NUSO.io makes it easy to manage, provision, and automate communications across the full ecosystem in real time.

Today's Challenge

MSPs and enterprise IT teams often struggle with fragmented communication systems spread across multiple carriers, platforms, and regions. Manual provisioning, limited visibility, and inconsistent permissions create operational inefficiencies, slow deployments, and increase compliance risks, making it difficult to maintain control, scale services, and respond quickly to business demands.

NUSO Delivers

The NUSO.io Management Portal centralizes control across communications environments, giving MSPs and IT teams real-time visibility into numbers, services, and users. Fast provisioning, including number ordering and porting, role-based permissions, and integrated workflows streamline tasks, accelerate deployments, and simplify operations, enabling teams to maintain control, improve efficiency, and scale communications with confidence.

Multi-Tier Account Hierarchy

Centralize visibility and control across partners, resellers, and end customers with structured account management and top-level governance.

Granular Permissions

Assign role-based access to streamline partner workflows, improve security, and ensure the right level of operational control across users.

Real-Time Number Inventory Management

Track and manage DIDs and toll-free numbers across carriers and regions with instant visibility and allocation control.

Unified Dashboard

Gain full situational awareness across communications assets, activity, and performance, enabling faster decisions and immediate operational action.
